Course Exercise / Reference Files

What you will do

Work through the three tasks below using the site you picked in lesson 2.

Each task should take about twenty minutes. Keep your notes in one document; you will reuse them in the technical audit later in the course.

Task 1 - Crawl the site

Run a crawl and export the list of indexable URLs. Note how many pages return a status other than 200.

Task 2 - Map intent

Pick ten pages. For each one write down the query you believe it targets and the intent behind that query.

Task 3 - Find the gap

List any query from task 2 that has no matching page. That list is your content plan.

Reference: on-page checklist

Every page

- One H1 that matches the search intent
- A title under 60 characters
- A meta description written for the click, not for the crawler
- A canonical URL, even when it points at itself
- Descriptive alt text on every content image

Templates

- Breadcrumbs with structured data
- Internal links to the three closest related pages
- Reserved space for media so the layout does not shift

Before you ship

- Check the page in Search Console's URL inspection tool
- Confirm Largest Contentful Paint stays under 2.5 seconds on mobile
